Serial No.: 09/899,780 Docket No.: 70012590-04

I. AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims

- 1-12. (Canceled)
- 13. (Amended) A method of manufacturing a composition comprised of effector T lymphocytes generated by:
 - a. vaccinating a patient with a vaccine comprised of the patient's own malignancy and an immunologic adjuvant comprising GM-CSF;
 - b. removing primed peripheral blood T lymphoctyes from the patient;
 - c. stimulating the primed T lymphocytes to differentiate into effector lymphocytes in vitro; and
 - d. stimulating the effector T lymphocytes to proliferate in vitro.
- 14. (Cancelled).
- 15. (Original) The method in claim 13 wherein the removal step is performed by leukapheresis.
- 16. (Original) The method in claim 13 wherein the differentiation step is performed using anti-CD3.
- 17. (Original) The method in claim 13 wherein the proliferating step is performed using IL-2.

Serial No.: 09/899,780

Docket No.: 70012590-04

17. (Ori ginal) The method in claim 13 wherein the proliferating step is performed using IL-2.

18-22. (Canceled)

- 23. (new) The method in claim 13 wherein said patient's own malignancy comprises breast cancer.
- 24. (new) The method in claim 13 wherein said patient's own malignancy comprises astrocytoma.
- 25. (new) The method in claim 13 wherein said patient is vaccinated at multiple body sites.
- 26. (new) The method in claim 13 wherein the patient is vaccinated with at least 5×10^6 malignant cells.
- 27. (new) The method in claim 13 wherein said patient is vaccinated at the time of initial diagnosis.
- 28. (new) The method in claim 13 further comprising the step of irradiating said patient's malignancy prior to said vaccination step.
- 29. (new) The method in claim 13 wherein the removal step is performed by leukapheresis, the differentiation step is performed using anti-CD3, and the proliferating step is performed using IL-2.
- 30. (new) The method in claim 13 wherein the removal step is performed by leukapheresis, and the differentiation step is performed using anti-CD3.
